Home

Welcome To Datameer Version 7.0

Installing and Configuring Datameer

Setup Guide

The Setup Guide is for people who are installing Datameer for the first time. Check the requirements and supported platforms, then download and install Datameer. Where to next? The Concepts Guide, Basic Tutorial, and Getting Started Tutorial pages help you get started.

Administration Guide

The Administration Guide is for people with Datameer administration rights. It helps you set up users and connections, import data, set up jobs, configure the Hadoop cluster settings, database drivers and email server. You might also find the Hadoop and Datameer, FAQ, and Support Forum useful.

Hadoop and Datameer

The Hadoop and Datameer guide is for people with Datameer administration rights. It helps you set up and configure the Hadoop cluster settings for several different environments, learn about and use third-party monitoring software, and learn about using Datameer and Hadoop with VMware.

Using Datameer

Datameer User's Guide

The Guide for Analysts is for analysts, system administrators – anyone who uses Datameer. It helps you get started accessing data, working with workbooks, and analyzing data. Try creating a worksheet, then add formulas, sort or filter the data and use the widgets to create infographics that lets you visualize your data different ways.

Datameer Functions

The Datameer Functions guide explains how to use the Formula Builder and then provides a reference to the more than 240 built-in functions that are available to you. In addition, because Datameer is extensible, you can use functions from third-party tools or write your own commands.

Extending Datameer

Developer Guide

The Guide for Developers resources are for
software developers who want to create their
own plug-ins for Datameer. Take a look at the D
eveloper Tutorials and the API documentation.

Where to Get Help

Help and Support

Evaluating Datameer

The Contact - Help - Evaluation resources are
for people who want to take a closer look at
Datameer. You can evaluate Datameer in the
cloud on Amazon EC2 or you can try Datameer
in a standalone environment using a VMware
image. You can read more about both options
and evaluate Datameer using the choice that is
best for you.
