

Setting up Security and Permissions

You can specify what authentication process you want to use for Datameer. See [Configuring Authentication](#) for details.

Set access permissions on data such as for import and export jobs and for data links and connections. See [Data Access Permissions](#) for details. You can also set permissions for workbooks and infographics.

Set up permissions for users and create groups of users to conveniently manage your settings. See [Managing User Accounts](#) for details.

User roles such as Analyst and Admin to administer security settings.
