

 **Datameer Spotlight**

Benefits

Reduce Risk

Eliminate data copying risks while maintaining enterprise governance & security. Spotlight is a single, self-service platform that delivers new analytics fast with enterprise security and governance. With Spotlight, you no longer need to use disjointed tools to access data and no need to sacrifice security and governance as you migrate to AWS.

Deliver More Trusted Results

With Datameer Spotlight, data professionals build a community-sourced, trusted knowledge base around not only AWS data, but all your data. Quickly find and collaborate with trusted subject matter experts to not only efficiently reuse assets but also harness new data sources in any domain. And expertise is coupled with data assets, so businesses retain data knowledge - no matter what the future holds.

Powerful Data Discovery & Exploration

Datameer Spotlight makes it easy for analysts to discover and explore all of your AWS data landscape. With Spotlight, analytics teams quickly solve business problems faster with the best data, no matter where it resides.

“Spotlight’s discovery and collaboration features are a game-changer that brings my team together and delivers more valuable insights.”

Strategy Manager,
Large Healthcare Payer

Accelerate hybrid analytics across your AWS data landscape with Spotlight’s intuitive, self-service UI.

Datameer Spotlight delivers everything your analytics teams need – discovery, access, collaboration, knowledge sharing and governance – in a single integrated platform across your hybrid data landscape to accelerate and take the risk out of your cloud analytics.

With Datameer Spotlight, analysts complete projects 20x faster with access to more AWS resources.

Discover

Today’s analytics data assets are spread across increasingly complex landscapes and come in many forms. For example, some workloads may reside in Redshift and S3 buckets, while others remain on-premises. Spotlight provides a single hub where analytics teams can quickly discover all their analytics data assets and understand which best solve their problem. Analysts and data scientists can search, find and use more assets in their analytics to quickly produce the actionable results management desires.

Consume

Copy and duplicating this data comes with high cost and risk. Spotlight’s optimized virtual access layer enables teams to directly consume data, regardless of where it resides, enabling analysts to quickly & securely focus on the analysis. By leaving data in place and protected Spotlight eliminates security risks and resource-intensive data movement processes.

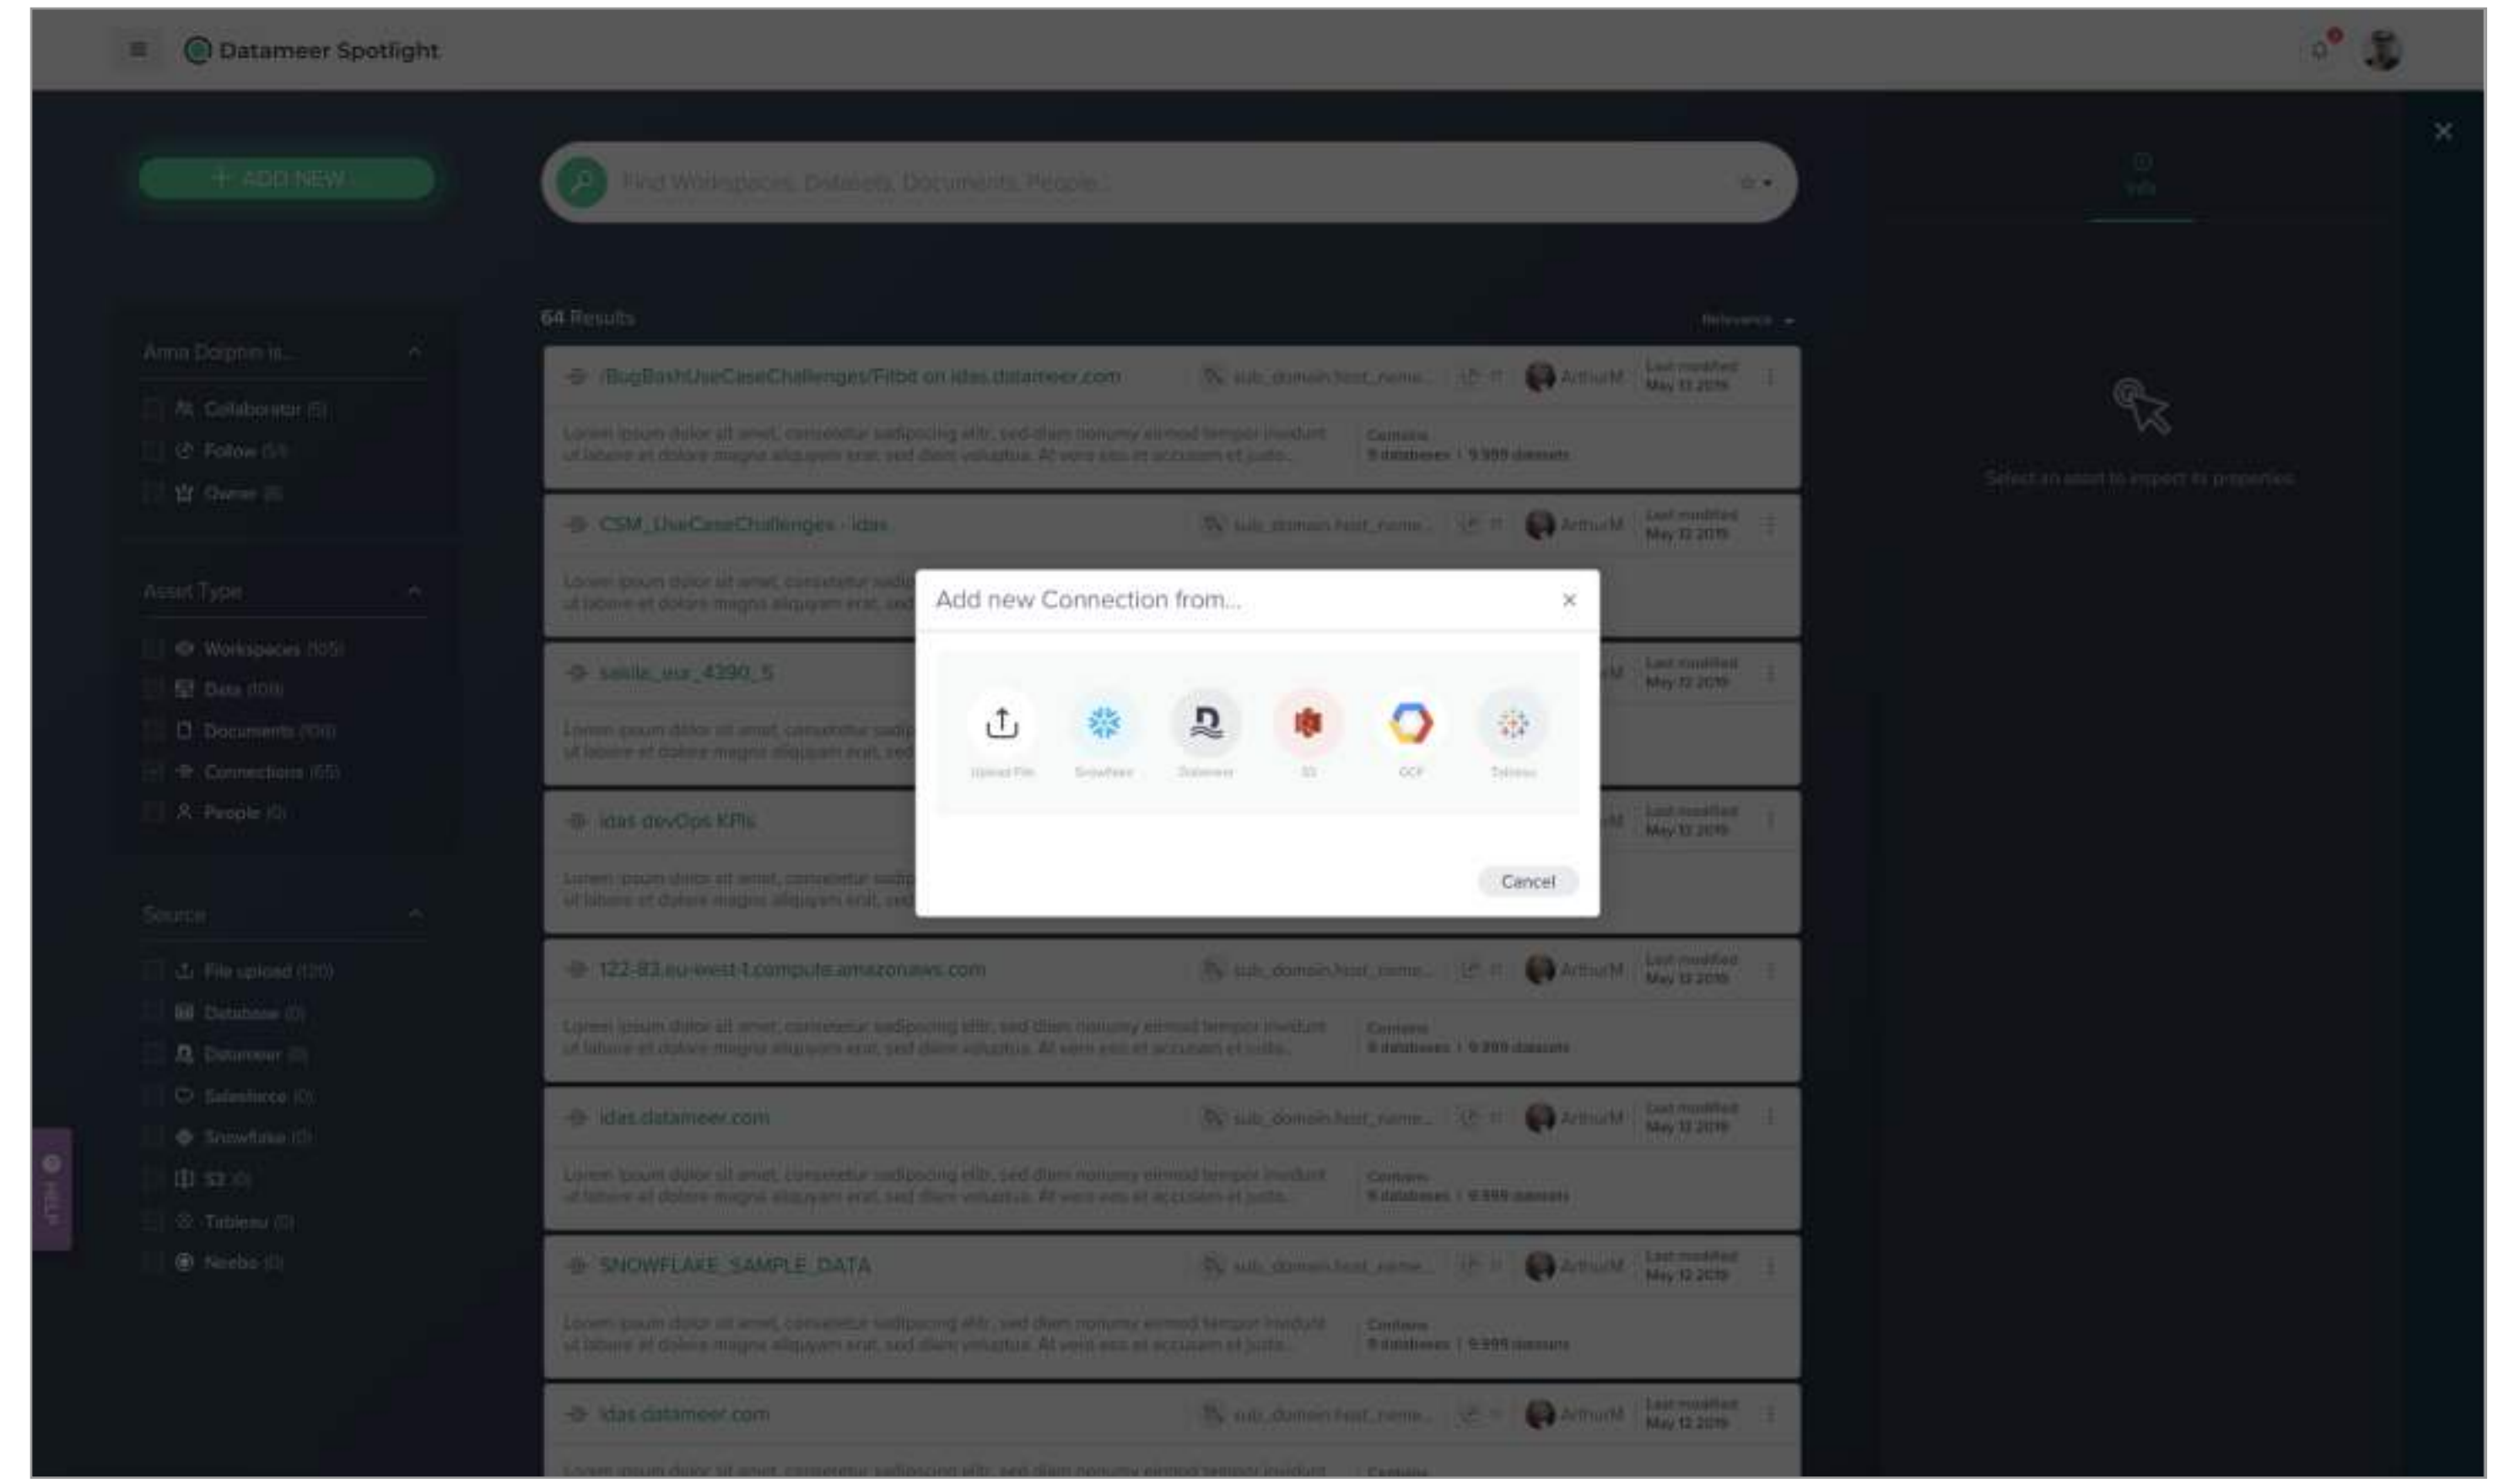

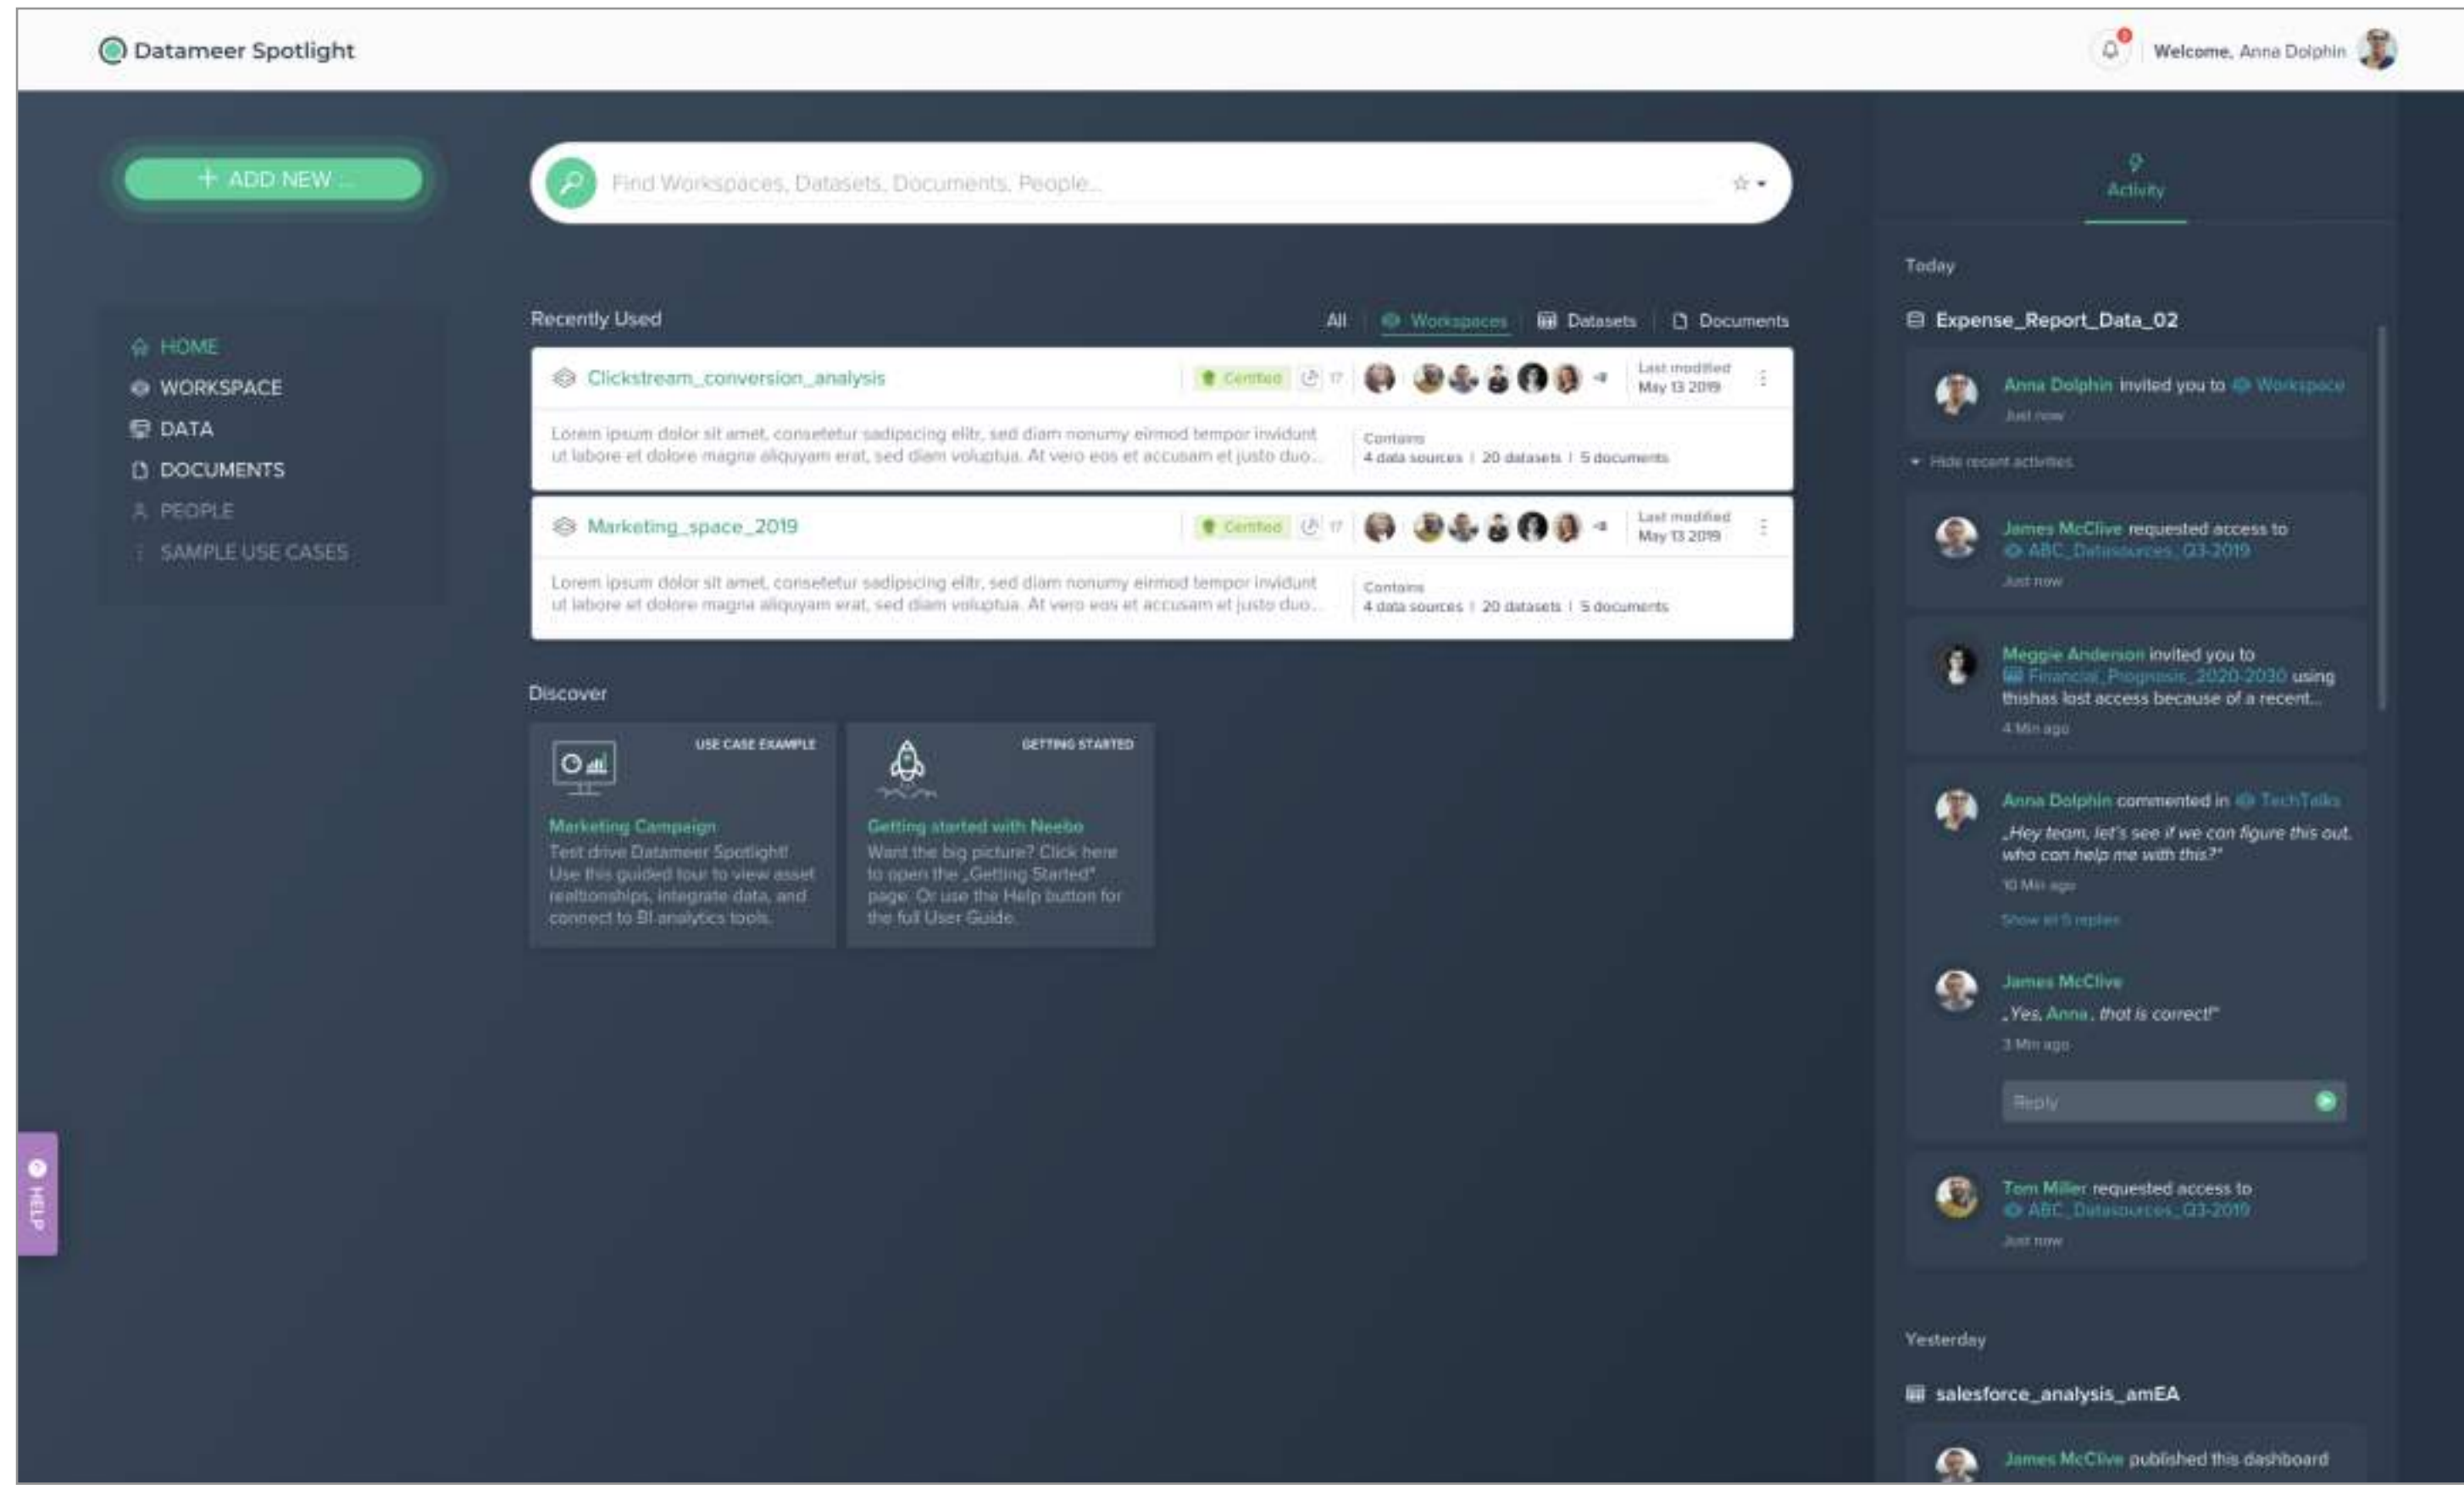

Collaborate

With an ever complex data landscape, many teams struggle to make sense of what data assets are out there, where they reside, what they mean and how to best use them. Spotlight provides a collaborative environment where teams can share and reuse assets, collaborate to form new assets, and increase knowledge using familiar social media-like features and AI-augmented information about data and how it is used.

Governance

Broader access to data cannot come with governance and security risks. Spotlight provides a deep suite of security and governance features and seamless integration with existing controls used in your enterprise so tasks are not duplicated. These capabilities are well matured from Datameer’s ten years of experience working with large enterprises in highly regulated industries requiring deep security and governance.

Datameer Spotlight Features

 **CONNECTORS / SOURCES**

- ✓ Redshift
- ✓ S3
- ✓ GCP
- ✓ Snowflake
- ✓ MySQL
- ✓ Datameer X
- ✓ Teradata
- ✓ Oracle
- ✓ SQL Server
- ✓ SAP BW
- ✓ Hive
- ✓ Postgres
- ✓ MongoDB
- ✓ Excel/CSV
- ✓ Documents
- ✓ Tableau Catalog

 **FIND / DISCOVER**

- ✓ Tables
- ✓ Views
- ✓ Connections
- ✓ Workspaces
- ✓ Documents
- ✓ Faceted search

 **GOVERNANCE / SECURITY**

- ✓ Encryption at-rest
- ✓ Encryption in-flight
- ✓ Security pushdown
- ✓ User access & controls
- ✓ SAML/SSO
- ✓ Trust levels
- ✓ Lineage
- ✓ PII Identification
- ✓ Auditing

 **COLLABORATE**

- ✓ Shared spaces
- ✓ Newsfeeds
- ✓ Notifications
- ✓ Comments
- ✓ Descriptions
- ✓ Tagging
- ✓ Following
- ✓ Custom metadata
- ✓ Business glossary
- ✓ Modeling

 **PUBLISH / QUERY**

- ✓ Tableau
- ✓ Looker
- ✓ PowerBI
- ✓ Excel
- ✓ Jupyter
- ✓ Any tool with JDBC

 **OPERATIONALIZE**

- ✓ Cloud-native platform
- ✓ Best-place query optimizer
- ✓ Data caching
- ✓ Snowflake/CDW caching
- ✓ Query logging
- ✓ Performance auditing
- ✓ Clouds : AWS & GCP

About Datameer

Datameer transforms businesses into agile, data-driven organizations by democratizing access to all enterprise data through secure, governed, business data pipelines with Spectrum, and virtual access, search, modeling and collaboration with Spotlight. Business and data analysts can immediately prepare and explore even the most complex, dispersed data, and instantly transform it into business consumable information, both on-premises and in the cloud.
